MARGO USHAKOVA

Land the Interview, Open with Confidence: English for IT Professionals

A self-study e-book that helps IT professionals handle the first steps of a job process in English

This book helps IT specialists describe their work well in English

THE PROBLEM

You know your job well but struggle to describe it in English

Many IT specialists write CV lines that sound vague, and they freeze on “Tell me about yourself.”

↓

THE SOLUTION

A self-study e-book for the first steps of a job process

It follows the real order of the process: first the application, then the first conversations. It is written for professionals in any IT role.

The first chapters take you from your CV to the recruiter call

01

CV, LinkedIn, and Cover Letter

Turn duties into achievements and write clear, consistent application documents.

02

Why This Company, Why This Role

Explain your motivation and connect your background to what the company needs.

03

Tell Me About Yourself

Build a clear 1-2 minute introduction.

04

The Recruiter or HR Screening Call

Handle the first, shorter, logistics-focused conversation.

The later chapters cover the interview and end with a recorded practice run

01

Small Talk and Video-Call Etiquette

Make a good first impression and handle online interview situations.

02

Working in Global and Distributed Teams

Describe your experience with international teams and show you can adapt.

03

Your Tech Stack and Tool Choices

Name your technologies and explain why you chose them.

04

Revision and Mini Mock Interview

Review everything and test yourself in a recorded mock interview.

Every chapter follows the same seven steps

Step 1

Warm-up

why the topic matters
in a real interview, plus
short reflection questions

Step 2

Key language

the vocabulary
and phrases you need

Step 3

Grammar focus

one grammar point
per chapter, chosen
because you actually
need it to answer
that kind of question

Step 4

Guided practice

vocabulary, grammar, and
chapter-specific exercises

Step 5

Interview simulation

record yourself
and check your answer
with a checklist

Step 6

Tips and red flags

practical advice, plus
common mistakes
with better alternatives

Step 7

Self-check

“I can...” statements so you
see your progress

Every part of the book is built around real interview situations

- Every grammar point helps you answer a real interview question
- Examples are mixed across backend, frontend, DevOps, QA, and data, so you can adapt each task to your own work
- Each chapter ends with a recording task, so you practice speaking
- Exercises use your own experience, so answers stay honest and natural

A practicing tutor wrote it for IT specialists at your English level

B1-B2

English level

8 chapters

Chapters

9 years

Teaching experience

By the end, you can handle the application and the first conversations

Your application and introduction

Write a clear, results-focused CV, LinkedIn profile, and cover letter

Explain why you want a specific role and company

Introduce yourself in a structured way

Your first conversations

Answer typical recruiter questions about availability, work format, and next steps

Handle small talk and video-call problems politely

Describe your experience with international teams

Explain your tech stack and justify your choices
